GENUINE PRESET HUB ASSEMBLIES

Steer, Drive & Trailer Hub Assemblies

Extended-life wheel seal protects internal components

Our hubs include extended-life wheel seals. They control depth, provide maximum sealing efficiency, and protect internal components against leaks and contamination.

Precision-stamped tone ring (optional)

As an integral component for ABS equipped vehicles, we install precision stamped tone rings to our PreSet hub assemblies.

PreSet Spacer provides a fixed, dimensional bearing adjustment

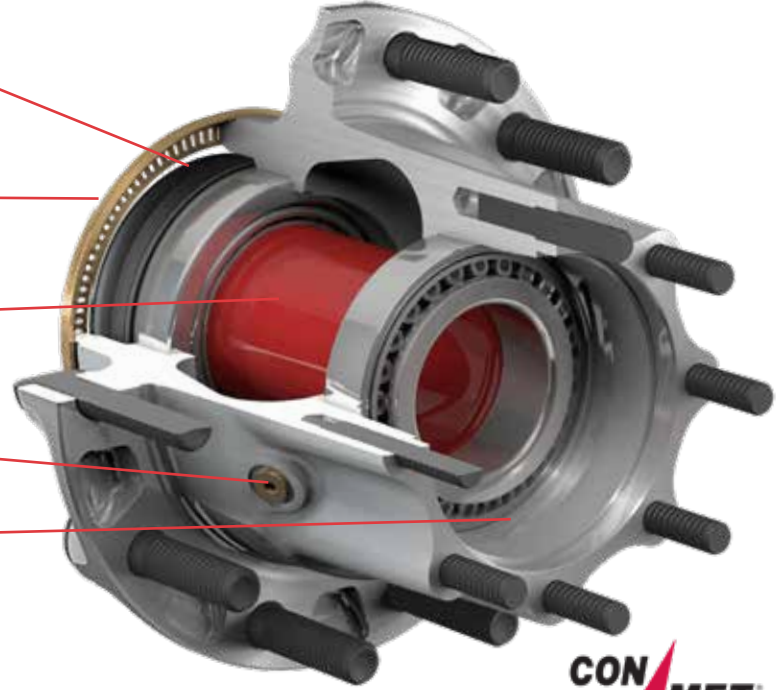

Our precision-ground spacers provide fixed, dimensional bearing adjustments, which are more precise than conventional hubs.

Fill hole simplifies installation of lubricants

PreSet hub assemblies come standard with fill holes, so lubricants of all types can be installed easily and efficiently.

Tapered roller bearings deliver exceptional life

PreSet hub assemblies incorporate inner and outer tapered roller bearings, which are designed with very special tolerances selected to extend the life of the bearings inside.
